How it works

The revolutionary, cost effective way to protect and manage your assets and equipment.

For the owner, VisionTrak is simple to use. Once a security terminal is installed, the owner needs only to arm the system when leaving it unattended. The asset or vehicle then establishes a geographical border.

If it is moved out of it's designated area, VisionTrak sends an alert to the control centre. From the control centre, the VisionTrak operators can continually monitor the movement of the stolen property and can immediately alert the owner and/or the police

WIN \$1200

AssetTrak system*

Go to www.visiontrak.com.au and enter your details into our online registration form and you could win an AssetTrak system fitted into your vehicle complete with 24/7 monitoring for 12 months.

*Terms and conditions apply.

AssetTrack R.R.P. = \$990inc GST (fitted)

Monitoring pricing based on a 36 month monitoring plan @ \$19.80inc GST per month

AssetTrak SafeTrak PetTrak CustomTrak

AssetTrak

AssetTrak is a compact, reliable and cost effective device to protect and manage all assets.

AssetTrak can offer real time information on assets including routes, time spent on trips and on site, stop and go counts and security status can be collected and monitored.

AssetTrak is recognised as an effective anti-theft device. Some insurers will waive the theft excess on any claim where AssetTrak is fitted and monitored.

Features

- Rugged design with Anodised Aluminium housing
- Quad band, works worldwide
- Assisted Global Positioning System (AGPS)
- Personalised safety zones
- Real time location request
- Memory to store location and event data
- Immobilisation
- Actual speed and odometer reading
- Backup battery
- Low battery alert
- Panic button
- 1 x RS 485 Port for connecting external devices
- Built in CAN bus reader
- G-force sensor
- Multiple I/O with inbuilt relays
- Remote upgrade application
- Supports Dual SIM (subject to GSM provider)

PetTrak

PetTrak is a reliable and accurate way to locate your pet and bring them home safely if they are missing.

PetTrak is small, lightweight and water resistant and can be attached comfortably to your pet's collar. You can pinpoint your pets location on demand via the internet or on your mobile phone.

You can trace your pet's real time location and their path taken since leaving home. You can also create and activate your own pre-defined safety alert zones. Once your pet leaves the zone, you will receive an alert message by either SMS or email, immediately.

Features

- Small and lightweight (60g)
- Water-resistant
- Personalised safety alert zones
- Long battery life
- Assisted Global Positioning System (AGPS)
- Real time location request
- Travel path history
- Durable and secure pouch collar attachment

SafeTrak

SafeTrak is a small and powerful personal locator, which is designed for personal remote positioning and emergency reporting.

SafeTrak instantly reports the location of the person you are looking for.

You can also create and activate your own personalised safety zones. Once the person leaves the zone, SafeTrak will send an alert either by SMS or email, immediately.

Three speed dial buttons can be programmed with call out numbers. A panic button contacts the emergency contacts and a Park button defines and activates a current location as a safety zone.

Features

- Portable and compact
- Lightweight (70g)
- Personalised safety zones
- Long battery life
- Support Assistance GPS (AGPS)
- Real time location request
- Travel path history / replay
- 2-way voice communication
- Programmable call buttons
- Panic button for emergencies

CustomTrak

CustomTrak is a tailored solution designed specifically for your business using a combination of wireless, voice and data communications systems. Once integrated these systems provide accurate and timely information that is relevant to your business requirements.

By understanding the needs of our customers our consultants are able to design, build and implement solutions that are relevant to your needs.

Some of the benefits of CustomTrak include:

Reduced Fleet and Asset Costs:

- Better scheduling of maintenance and other fleet related activities.
- Allowing for accurate reporting of Business and Private Kilometres for your fleet FBT reporting.
- Managing fleet utilisation and use management tracking and reporting.

Improved Compliance:

- By allowing for incident reporting and alerts (speed, fixed route control) to be identified.
- The management of driver fatigue and driving hours can be tracked to policy.
- Through the automation of maintenance and mass management for trucks.

Improved Safety:

- By knowing employee locations especially when operating alone.
- Remote checkpoints established as through points for assets working in rural regions.
- Security and duress alarms available to protect drivers.

Contract Management:

- Immediate dispatch and deployment of people or assets improves response times.
- Real-time billing opportunities.
- Service Level Agreement management and reporting.

Application Area:

- Passenger Vehicles
- Commercial Vehicles
- Marine
- Earthmoving and Construction

Expertise:

- Service Provider
- Software development
- Hardware development
- Project Management
- Communications
- Consultancy
- Fleet Management

All solutions are tailored specific to the requirements of your business.
